

Artemis 7™

Enterprise Investment, Asset, and Portfolio Management Software

Artemis 7 guides organizations to help them achieve their goals. Today's global economy dictates that success is determined by an organization's ability to identify and execute the investments and actions that generate the greatest benefits and are most closely aligned with its strategic goals. Organizations need all of their portfolios, investments, resources, and project plans in one place. They need a system to align information and decisions from the top down with the bottom up. They need a system that can withstand the demands of enterprise use and facilitates work, not create more of it. Artemis 7 is the only enterprise system that enables real time reporting and decision making at the portfolio and investment level based upon real time project and resource data entered by managers and knowledge workers.

Artemis 7 Provides:

- A usable, scalable, secure **enterprise-wide solution** for diverse processes across companies, departments, and teams
- For all types of investments, including **products, assets, programs, and projects**
- A complete picture from **investment portfolio management** to **financial & resource management** to **program & project governance** to **project planning & scheduling**
- **Optimized** decision making tools and **customized reports & analysis**

Artemis 7 includes:

Investment Portfolio Management

- Manage the full investment/product/asset life cycle, with demand/idea management, initiative selection & prioritization, business, financial and risk indicators
- Dynamic dashboards and analytical capabilities
- “What-if” simulations

Financial & Resource Management

- Corporate & departmental budgeting, investment cost control
- Full Multi-currency financial management and reporting
- Department staffing management, investment headcount management
- Capacity planning

Full Support for Enterprise-Wide Deployment

Scalability & performance:

- Artemis 7 has been designed, developed and tested to support 10,000s of investments and projects, 10,000s of resources, 1,000s of departments/teams
- 100% Web based

Enhanced data and access security:

- Role-based security for portfolios, investments departments
- Investment and project governance process to provide an efficient control of editable or viewable attributes and features
- Guest roles for external stakeholders

Enterprise-wide repository & investment portfolio:

- Department-specific budgets & staff/resource management
- Multi-currency

Program & Project Governance

- Governance methodologies, project templates and approval processes
- Cost & headcount management – multi-versioning for baseline and simulations
- Key milestones and risk management, execution management

Project Planning & Scheduling

- Embedded web-based scheduling interface
- Mono or Multi-project schedules
- Integrated time tracking and reporting
- 2 – way integration with Microsoft Project
- 2 – way integration with Artemis Views

Enhanced reporting capabilities:

- Dynamic Views for Executive users
- Key document management, discussion threads and alerting
- Collaboration and information sharing between stakeholders and contributors
- Extended reporting capabilities with the embedded Excel integration
- Automated and configurable datamart for external reporting and data exchange

System Flexibility:

- Highly configurable options
- Simple Localization
- Software Development Kit & APIs for extensions & interfaces

Investment Portfolio Management:

Artemis 7 allows companies to manage their whole investment portfolio across all departments by helping them to gather and screen new demands, ideas or initiatives, to define and classify investments, to prioritize investments, to manage and arbitrate budgeting and resource allocations, to review regularly the investment portfolio and to model alternative investment strategies. Artemis 7 performance, usability and features as been designed and developed to support huge amount of data and to facilitate data analysis and retrieving.

Demand & Idea Management

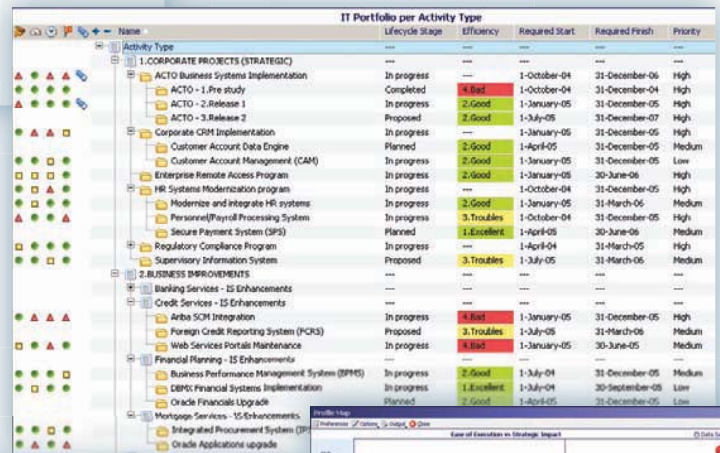

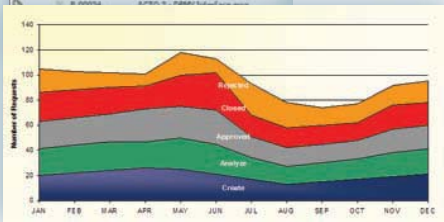

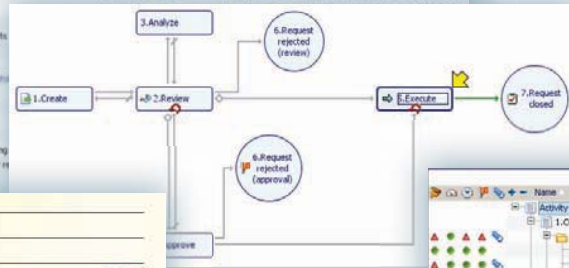

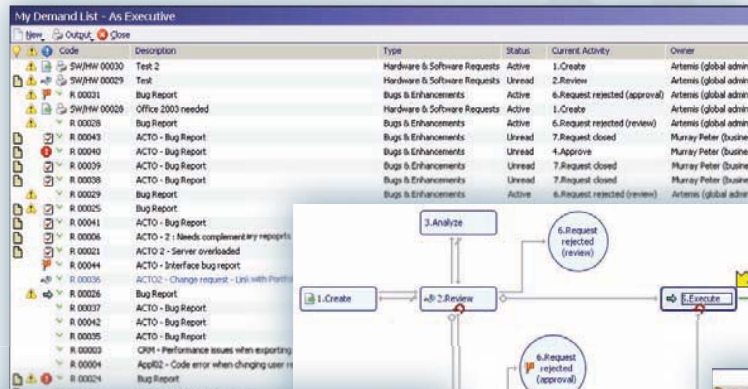

- Demand/Idea gathering and screening : A7 can support 10.000s of demands
- Configurable workflow:
 - Conditional flow management with specific demand attributes
 - Security by work flow step and user role
- Dynamic links between ideas and investments

Investment Selection & Prioritization

- Advanced algorithms for multi-criteria scoring
- Financial, resource, business & risk metrics for accurate analysis
- Scenario management and simulations (financial and headcount)
- Direct analysis of arbitration consequences

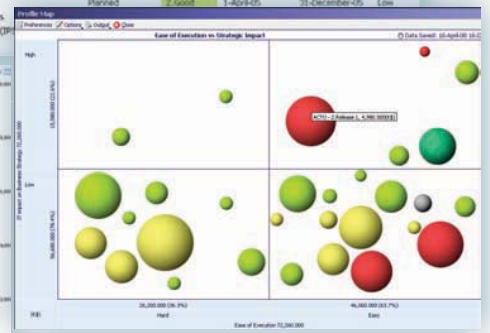

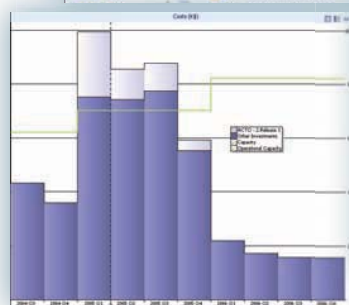

Capacity Planning

- Corporate and departmental capacity planning
- Financial and headcount
Advanced simulation & analysis tools

Portfolio Analysis & Reporting

- Pipeline analysis (metrics and trends)
- Corporate and departmental reporting
- Enhanced searching, filtering and sorting capabilities for large portfolios
- 'Drilling' capabilities for details analysis
- Custom reports with the embedded MS Excel interface
- Datamart

Program & Project Governance

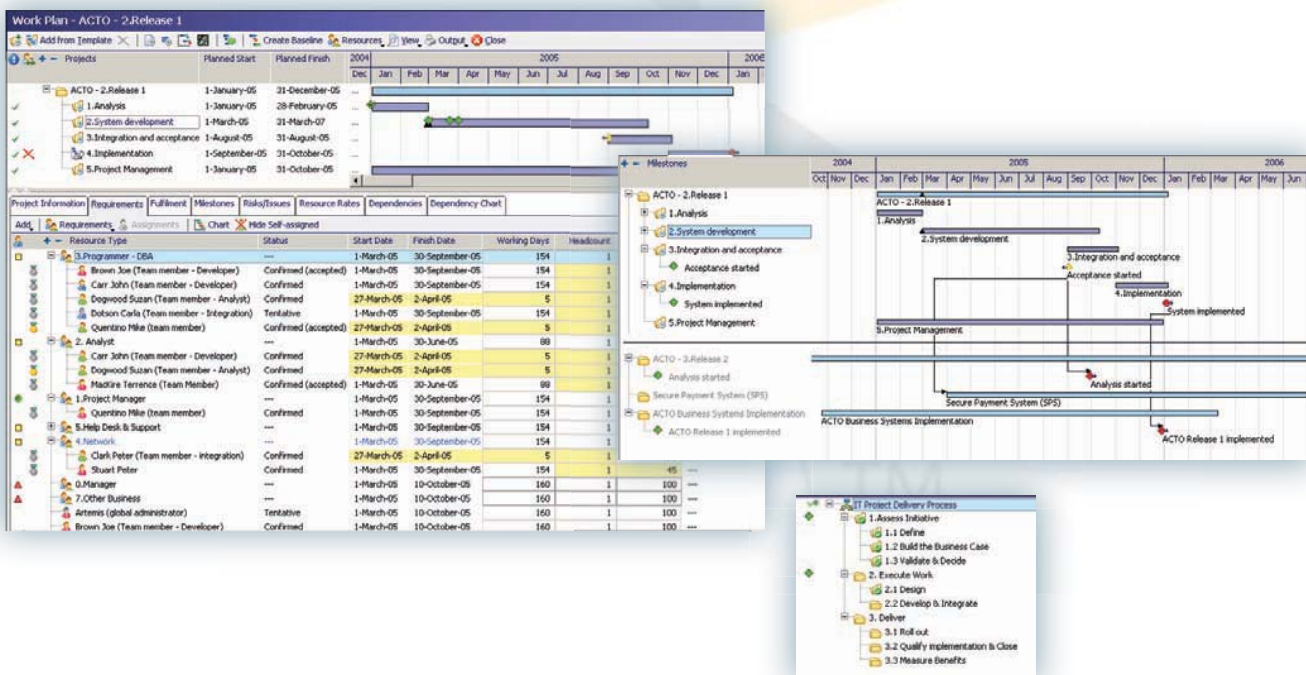

Artemis 7 program and project governance approach covers the entire project lifecycle, from initiation through to close-out. It enables program and project managers to plan top-down, initially defining high level phases or work packages, milestones and resource requirements and then providing increasing levels of detail through detailed planning & scheduling as required during the lifecycle of the project. This approach offers substantial benefits compared to bottom-up planning, which requires detailed and complex project planning before it is required, or before enough information is available to plan accurately and effectively

Project Templates

- Detailed templates for projects, including tasks, milestones, task links and resources

Configurable Governance Processes

- Governance methodologies and approval processes by steps
- Key milestone management including milestone trends
- Available software capabilities controlled by investment life cycle and user role

Investment History Management

- Investment baseline management (costs, headcount, benefits, plans & milestones)
- Snapshots for trend analysis and comparison
- Datamart for history analysis

Risk and Progress Management

- Risk and issue management with ownership and alerting in case of risk update
- Progress reports including project manager comments, milestone summary and financial & resource status

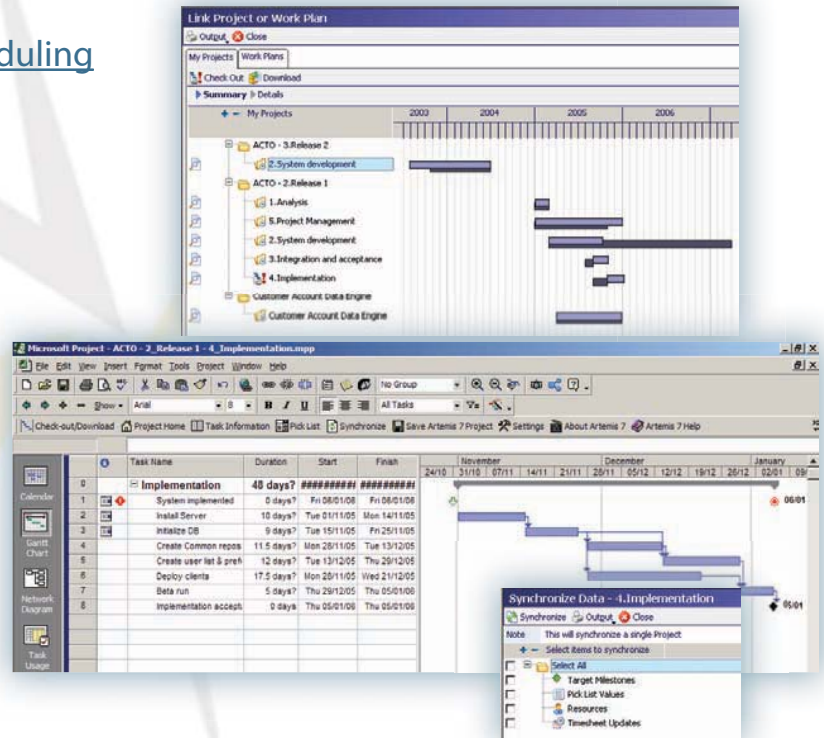

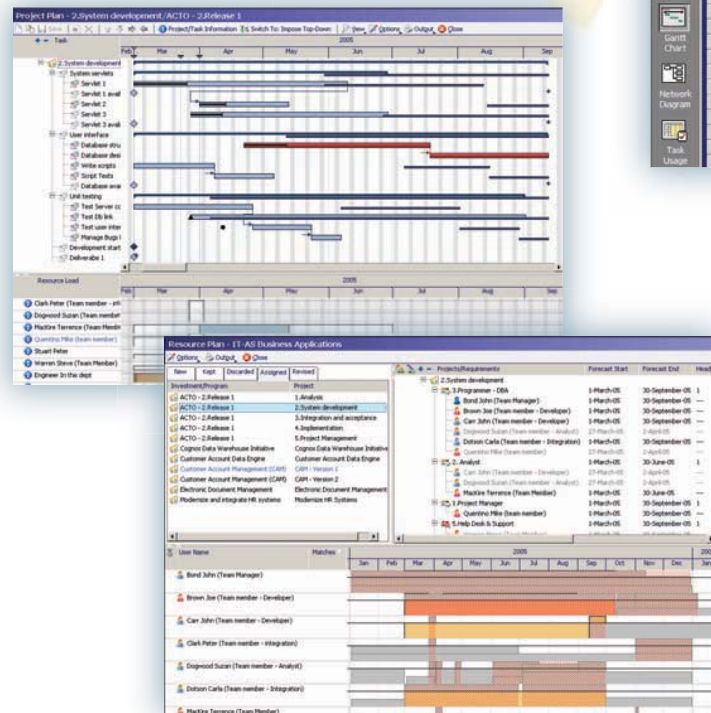

Project Planning & Scheduling

Through its embedded planning & scheduling capabilities and its interfaces with market standard products, Artemis 7 enables Project Managers to allocate project team members to discrete project tasks if required and update project plans with progress from those team members (timesheets).

Artemis 7 also provides comprehensive resource rating enabling the project costs to be automatically calculated and compared with planned expenditures and headcounts. Program Managers can roll-up and compare the agreed program level budgets for costs and headcounts, with the forecasts and actuals from the underlying projects.

Embedded Full Web Planning & Scheduling

- Task breakdown structure – Mono or Multi-project
- Milestones and Links
- Resource allocation – Generic and individual
- Timesheets importation and progress management
- Full integration with program & project governance:
 - Top-down and Bottom-up
 - Project Dates, milestones and resources
 - Dynamic dates and progress update
 - Dynamic Alerting

Enhanced Interface with Microsoft Project

- Mono or multi-project Planning
- Shared repository for attributes and resources
- MSP plans saved in the Artemis 7 database
- EVA and financial metrics rollup
- Timesheet importation for progress update
- Date and effort rollup into A7 project structure

Interface with Artemis Views

- Project Repository, resource and milestone synchronization
- Resource and dates rollup

Configuration Management and Supported Platforms

Artemis 7 offers a highly configurable solution, with a web-based architecture designed to support distributed environments. Artemis 7 supports the majority of popular platforms and environments, maximizing the investment in deployed technologies.

Artemis 7 provides multi-language support including DBCS and is available today in English, French, German, Spanish, Italian, Russian, Dutch, Japanese, Chinese, and Korean.

Main Supported Environments:

Databases

Oracle 9i & 10.2.02 on Windows 2000, 2003 or SUN
SQL Server 2000 SP3 or 2005 on Windows 2000, 2003

Server Operating Systems

Windows 2000 Server
Windows 2003 Server, Enterprise Edition
SUN Solaris

Web Servers

Microsoft IIS
BEA WebLogic Server
IBM WebSphere
JRE on Web Server
Sun JRE

Web Browsers

Microsoft IE, Mozilla Firefox

Servlet Engines

New Atlanta ServletExec
Native Servlet Engine for BEA WebLogic Server
Native Servlet Engine for IBM WebSphere

Client Operating Systems

Windows 2000 Professional
Windows XP Professional

Type 4 JDBC Drivers

DataDirect drivers embedded for Oracle and SQL

Client JVMs

MS Client Java Virtual Machine
Sun Client Java Plug-in

Typical Client Hardware Configuration:

Pentium Level Processor, Screen Resolution 1024x768 or higher, Minimum RAM 256MB, Recommended 512MB

Please refer to the Artemis 7 configuration datasheet for the complete list of supported environments and software version numbers.

The Artemis Advantage

Artemis International Solutions Corporation is the world's leading provider of Enterprise Investment, Asset, & Project Management solutions that help worldwide companies to execute strategy through effective portfolio, department and project management.

With more than 30 years experience in portfolio and project management, over a million users worldwide, and a global network covering 44 countries, Artemis has helped thousands of companies to improve their business performance through better alignment of strategy, investment planning and project execution.
