

Artemis Views

Project and Resource Management Solutions

ARTEMIS VIEWS the industry leading enterprise project and resource management solution delivers enhanced project management capability through a single, synchronized product suite.

Designed to address an organization's specific project and resource management objectives, Artemis Views modules facilitate the creation of custom solutions:

- Project Management
- Advanced Planning
- Advanced MSP Planning
- Time Reporting
- Earned Value Management
- Project Analytics

PROJECT MANAGEMENT

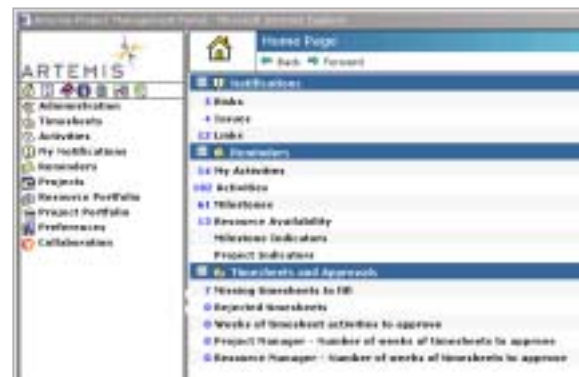

A collaborative project and resource management environment providing role based access to project data through a simple web browser.

Artemis Views **Project Management** portal represents a significant advance in the area of project management. The solution brings together in a single environment all relevant project and resource data for display, modification, processing and reporting. This applies equally to structured data (dates, resources, costs, etc.) and unstructured data (documents, risk, e-mails, reminders, etc.)

Using the latest generation of web technology, the **Project Management** module significantly increases the number of informed project stakeholders, and ensures everybody fulfills their defined roles and responsibilities, thereby delivering to the enterprise the real benefits of collaborative project and resource management.

- Visibility of project and resource data specific to each role
- Macro planning and resource management
- Monitoring of project and non-project activity
- Role based alerts and reminders
- Qualitative risk and issue management
- Project related document management
- Role based reporting
- Single database
- Links to other web applications
- Access advanced project management functions within Artemis Views: planning, earned value management, project analytics, etc.

A home page based on individual user roles

The principal roles that can benefit from the Project Management module include:

- **Senior Management**
- **Program Managers**
- **Project Managers**
- **Resource Managers**
- **Individual Resources**
- **Project Office**

The Project Management portal provides the following core project management functions:

Personalized homepage:

Provides access to project data based on role and defined authorization level (security).

Customized alerts and reminders:

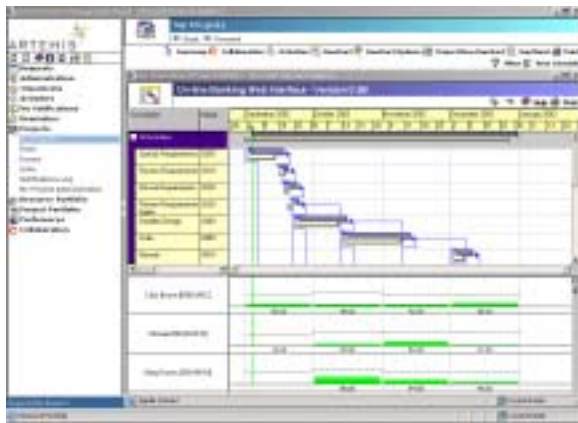

Inform users in real-time of critical information and necessary actions.

Project Portfolio Management:

Analyze and review project portfolios through multiple selection and consolidation criteria (cost, resources, organization structures, etc.).

Planning and Scheduling:

Create and update projects, add new activities and time schedule projects. Access the specialist planning functions available through the Advanced Planning and Advanced MSP planning modules.

Web Project Barchart and Histogram

Resource Management:

View resource requirements established by the project managers and individual assignments based on availability.

Cost Control:

Review budgets, forecasts and actual costs through multiple breakdown structures. Access the Artemis Views Earned Value Management module.

Timesheet Tracking and Approval:

Use electronic timesheets (local or web) with proven enterprise scalability to record actual and remaining time for project and non-project activities.

Web timesheet entry screen

Risk and Issues Management:

Detect and assign project risks and issues to any multi-project code structure element, project or activity. Assign responsibilities for individual risk and issue monitoring.

Executive Reporting:

Access information from multiple business perspectives for various user roles.

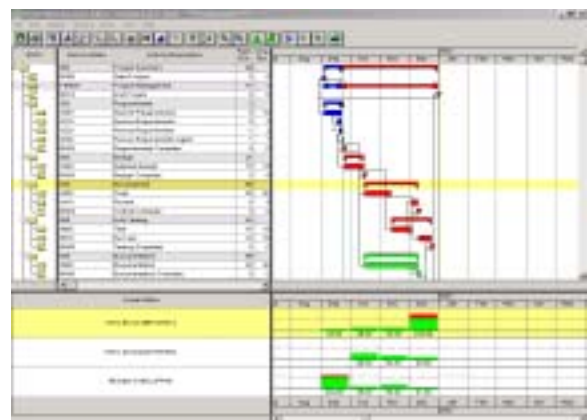

ADVANCED PLANNING

Designed for project managers, project planners and resource managers, Advanced Planning combines multi-user project planning, resource allocation and scheduling, cost control and graphical reporting capabilities, thereby enabling more effective planning and scheduling of core resources:

- Build and update project schedules using graphical Gantt or spreadsheet-style interfaces
- Assign resources to activities across multiple projects
- Establish and maintain inter-project relationships
- Prioritize activities during scheduling
- Maintain up to 99 different versions of projects
- Graphically compare a selected project version with a baseline version
- Conduct comprehensive “what-if” analyses
- Quickly view and edit multi-project scenarios without merging or duplicating data
- Generate milestone tasks to improve visibility

The Gantt-style barchart editor provides real-time project entry/edit (including copy and paste, drag and drop) capability with full critical path analysis and graphical reporting in single or multi-project mode.

A resource search engine and interactive resource histograms allow assignment of project staff based on skills and/or availability.

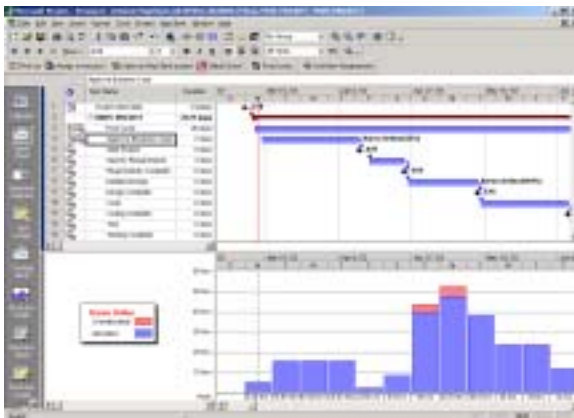

Combined Barchart and Histogram display

ADVANCED MSP PLANNING

With Advanced MSP Planning users can manage their projects and resources using a standard desktop environment through Microsoft® Project while benefiting from a centrally shared database and additional powerful features.

- For organizations already using Microsoft® Project, Advanced MSP Planning is an ideal solution for implementing standards, process and consolidated reporting based on a central system, thereby providing visibility and control of the portfolio of projects and resources
- For enterprise wide project management involving a large number of users, Advanced MSP Planning ensures the ease of use and power of the desktop MSP tool together with the benefits of a secure, structured and shared Artemis Views database
- For the numerous organizations already using Artemis Views, Advanced MSP Planning is the way to disseminate project management practices to a new population of more occasional users, while still keeping the benefits of a global solution

EARNED VALUE MANAGEMENT

Earned Value Management is a powerful application for project and program cost planning, control and earned value management reporting.

Designed for program managers, financial managers, cost and control account managers, controllers and Integrated Product Teams. Earned Value Management provides complete project, contract and financial management, as well as, analysis and reporting.

With Earned Value Management, organizations can manage and control all cost related project and program information on an enterprise level by using familiar cost planning tools from a single, graphical Windows-based application. The application includes online early-warning indicators and comprehensive reports for project performance visibility to ensure appropriate and timely management actions.

Combined WBS, OS and Control account display

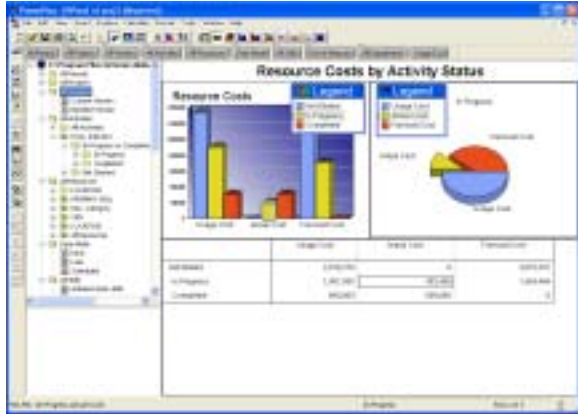

- Enterprise cost planning and control
- Financial perspective of project schedules, activities and resources
- Online cost data and variance analysis
- Full Earned Value Management (EVMS)
- Compliant project control and reporting
- Optional job server for large volume data processing and reporting
- Integration with other Artemis Views® applications
- Integration with industry-leading Enterprise Resource Planning (ERP) applications

PROJECT ANALYTICS

Comprises 2 independent modules; an OLAP component (GlobalView), and a Datamart.

GlobalView™ is a fully-graphical application for navigating, analyzing and reporting on Artemis Views® project, cost, resource and schedule information. Designed for executives, project managers, financial managers and department managers, GlobalView delivers point-and-click access to all corporate projects via an intuitive browser, or Windows-based application. Individuals throughout the organization can consolidate multiple project data and easily drill-down through relevant data dimensions to make informed business decisions.

- Work in either tabular or graphical formats
- Executive analysis and reporting
- Informed decision-making anywhere, anytime
- Interactive roll-up or drill-down through Artemis Views® project, cost and resource information
- Online "Briefing Books" for consistent and timely reporting analysis
- Output Web-based presentations to internet, intranet or e-mail
- Simple and intuitive point-and-click interface

Project and Resource Multi-dimensional Analysis Chart

The **Datamart** facilitates reporting and analysis by transforming and loading Artemis Views data into a streamlined structure for easier and faster querying.

- Open to all static reporting tools and analysis solutions – including OLAP, tabular and graphical tools, such as Crystal Reports, PowerPlay, Business Objects, Excel, Hyperion and Style Report
- Extracts and loads timesheet, project and resource management information from the Views database.
- Enables faster, simpler and more effective database querying. Its separate database structure enables data reporting without interrupting or slowing down the operational database
- Can be combined with other datamarts across your organization to enable enterprise-wide reporting
