

Bonita Open Solution

The Open Source Business Process Management Suite

Business Process Management (BPM) allows you to automate and optimize business processes.

With Bonita Open Solution, connect those processes to nearly any IT system, generate process-driven applications, and guarantee the benefits of BPM for everyone in the organization.

Available in both open source and commercial editions - *BPM democratization is on its way !*

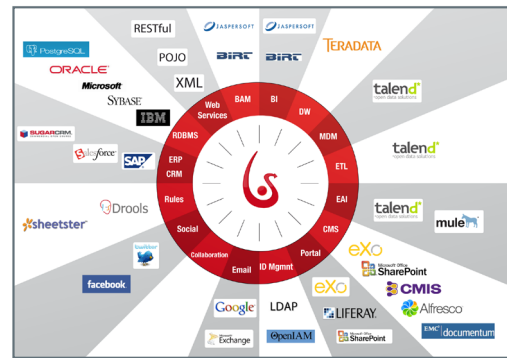

Design your processes just like on a whiteboard

Bonita Studio uses the Business Process Management Notation 2.0 (BPMN) so that technical and business audiences can easily communicate in a common, standardized language. It's easy enough for business users, yet powerful enough for technical users!

Connect your processes to IT systems easily

Bonita Open Solution includes dozens of ready-to-use Connectors for databases, messaging, ERP, CRM, CMS, and more. Just choose your connector and set the parameters. Need a new Connector? Find it on the BonitaSoft.org open source community site, or easily create your own!

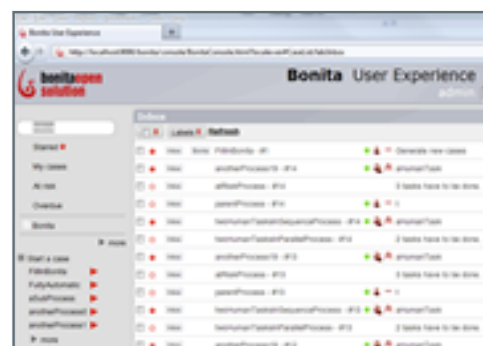

Run your processes with one click

Bonita Applications are like nothing you've ever seen in a BPM solution. A simple click is enough to run your process-based application. After including connectivity to your systems, you can graphically design web forms for your process and then generate your BPM application in one click!

Easily Manage Your Processes

Bonita User Experience is an intuitive portal that allows you to easily manage your daily tasks and follow-up overall activity.

A Powerful BPM Workflow Engine

Bonita Open Solution is powered by the Bonita Execution Engine.

The Engine is flexible enough to easily adapt to simple and complex architectures and powerful enough to support intensive workloads. It can be deployed within your Bonita BPM environment as well as independently within other applications.

There's a **Bonita Open Solution** edition for you, no matter your project requirements, time constraints, and budget! Each edition adds an increasing amount of functionality.

Open source

Start with this edition for your new or proof-of-concept BPM projects in which delivery time is not an issue and budget constraints are high. This edition includes friendly graphical modeling with the standard BPMN 2.0 notation so that business and technical stakeholders communicate in a common language. Access hundreds of Connectors to interface your processes with external systems. Users interact with processes through a user-friendly portal as well as generated process-based business applications.

Efficiency

For those projects with tight time constraints, this edition speeds business process delivery for commercial grade deployments. Accelerate your project delivery to the maximum extent with a wide range of corporate function business process templates (e.g., HR, Corporate Finance, Quality, and Help Desk). Have your own team, BonitaSoft, or its partners tailor the process to precisely fit your business processes.

Teamwork

Accelerate and secure your projects with this edition for entry-level commercial grade deployments that includes: annual support, a multi-user repository to share developments, developer productivity features, and document management. Business users can generate documentation for their processes and obtain Key Performance Indicator (KPI) reports on the process data. Finally, with the ability to include Connectors inside generated applications, you ensure that applications are ready for corporate deployment.

Performance

This edition is for mission-critical deployments, adding powerful features to ensure your deployment runs at peak performance. Monitoring capabilities guarantee that you know the real-time, precise status of resources and BPM entity behaviors. Error management facilities ensure that you can pinpoint any issues and resolve them immediately.

Bonita Open Solution : Major Feature Comparison	Open Source	Subscription Pack (Commercial editions include annual support)		
		Teamwork	Efficiency	Performance
Core BPM Suite Features: Process modeling, Connectors, Simulation, Application Generation, User Experience Portal, etc.	✓	✓	✓	✓
